

## SOFTWARE B-Viewer for NOVUS® B series DVRs

### Convenient CCTV system management

The software enables simultaneous connection with many B series digital video recorders and 3000 series IP cameras. Operator can work on multiple monitors and create on each one of them separate screens with various cameras divisions, so the observation is much easier

### Multi-level users' grants

Administrator can create many users' accounts with various grants. By restricting access to part of system resources, he eliminates a risk of making unauthorised settings changes. Operators have an access only to these functionalities that they need for daily work

### Advanced support of alarm events

The software enables monitoring of events from cameras and recorders, such as: motion detection, alarm inputs activation, video signal loss. Particular, dedicated window allows the quick image display from devices, which in the event took place.

You receive B-Viewer in set  
with NOVUS® B-series recorder.

You can find more information about B-Viewer software on:
